

# NOVOLAC EPOXY

Coatings, Repair Mortars, and Grout Systems

## Five Star® Epoxy Novolac Coating Epoxy Novolac Coating Non-Sag

Highly effective on both concrete and steel, Five Star's Epoxy Novolac Coating is a two-component, 100% solids system which is now also available in a non-sag version for vertical applications.

### Applications

- Horizontal and vertical applications
- High chemical resistance requirements
- Tank linings and external coatings

### Advantages

- Highly chemical resistant
- Excellent thermal shock and impact resistance
- Resistant to chipping and cracking
- Highly effective on both steel and concrete
- Low permeability
- Low odor

## Five Star® Novolac Structural Concrete

Designed for aggressive chemical environments, Five Star Novolac Structural Concrete is a three component, highly chemical resistant material for the construction or repair of curbs, trenches, floors and pads.

### Applications

- Horizontal concrete repairs
- Formed vertical repairs
- Concrete pads
- Precast trenches
- Setting mortar for acid brick and tile
- Flooring surfaces

### Advantages

- Highly chemical resistant
- Excellent impact and wear resistance
- Versatile application
- Excellent bond strength

## Five Star® Novolac Grout

A three component system designed for industrial applications where exposure to acids and alkalis can occur. Five Star Novolac Grout has excellent flowability, exhibits positive expansion (ASTM C 827) and has a 95% or better Effective Bearing Area.

### Applications

- High chemical resistance requirements
- Grouting for machinery or pump baseplates
- Process equipment

### Advantages

- Highly chemical resistant
- 95% Effective Bearing Area
- Nonshrink
- Exhibits positive expansion (ASTM C 827)
- Excellent thermal shock and impact resistance
- Superior bond to concrete or steel
